

a quantum leap
to collaborative
adaptive
e-servicing

Danaos Management Consultants S.A. is proud to introduce **DANAOS1.com**, the first complete e-servicing Platform for the Shipping Industry.

Based on the European Maritime Strategic Framework (EMSF), **DanaosONE™ (D1™)** is a professional B2B versatile e-servicing Platform that seamlessly integrates with your internal operational, safety systems & compliance policies, securely.

A QUANTUM LEAP TO COLLABORATIVE ADAPTIVE E-SERVICING

D1™ has been designed and developed with a top-down approach:

- To **promote collaboration** amongst Shipping Companies
- To **enable integration** between the various in-house systems that shipping companies currently use
- To **link your business activities** with your business partners and third parties, live, through an active shipping directory
- To **socialize professionally** via messages, forum postings, conferencing, etc.

D1™ offers a unique open, multi-tier, future-proof architecture that warrants your company's full control, agility and scalability.

You can choose the right mixture of cloud-based, or office-based services, in order to tailor your processes according to your needs, from Start to Finish.

No private information is retained on the platform, thus fully complying with the requirements of: business ethics, information privacy, security, and auditability.

The DanaosONE™ Platform will allow your company to progress faster into the new era of shipping, where team work, outsourcing, transparency, and visibility will benefit your organization in terms of performance, quality, and profitability.

Either in an Intranet Network, shared within Company's personnel or in an Extranet Network, operated amongst each Company's trusted partners, D1™ saves time and

money whilst assuring high Quality of Service (QoS) by transforming traditional transactions to securely offered e-services.

PLATFORM SERVICES

Joining D1™ will give you international exposure and endless possibilities to connect with other trusted members. D1™ provides a set of bundled services that facilitate Shipping Industry's essential everyday activities whilst allowing exposure of your products and services, creating new business opportunities.

OFFERED SERVICES

D1 can “bridge” any functionality provided by your in-house back office systems within a network of trusted stakeholders of your selection (extranet). Join D1™ and start exchanging information accurately and securely with your suppliers, partners, agents, brokers and affiliates avoiding the cumbersome of traditional information exchange.

INTERNAL SERVICES

Launch on-demand and expose to your internal users (intranet) certain in-house system functionalities as services. This set of services can facilitate two-ways secure remote access to corporate information and assure compliance with regulatory and statutory operational and safety processes.

SECURITY: D1™ uses web plugins that “bridge” your existing in-house back office systems with the Platform without retaining any sensitive corporate info locally, providing advanced security and real-time data interoperability.

Call + 30 210 4196600 or Email us at join@danaos1.com Today.

See for yourself how you can gain operational advantage using D1™.

MAIN FEATURES & FUNCTIONALITIES

- Expose your company's profile, products and/or services and establish confidential and authentic electronic relationships with companies of any type, sector and geographic location.
- Set up your online microsite and invite your partners and associates to share, endorse, collaborate and participate the experience.
- Place and advertise your Physical Stand and any Event and create a virtual experience to all users by uploading webcasts, videos, and brochures and make them available for anyone to download and share.
- Relate to a niche-Vertical (Shipping Industry) international operations exchange system; as a manager, broker, agent, charterer etc. whereas associating as a Buyer, Agent and/or Supplier. Leverage peer-to-peer communications without any withholding costs per transaction/service.
- Enhance collaboration and communication using WebLync and be there without going there, among intranet and extranet users leveraging bilateral communications, peer-to-peer and 4-corner model connections.
- Execute e-services with tasks, alerts and actions following ISO-based standardized processes that ensure compliance and QoS.
- Send and Receive electronic data generated by your in-house existing applications' ecosystem, in the format and channel of international business processes expected by the receiver without retaining or tracing corporate information what- so ever.

Avoid building and maintaining programming interfaces with individual buyer/supplier systems and storing data on cloud by letting our electronic transaction process (methodos™) execute the process transparently. Ensure security, confidentiality, integrity and authenticity of origin.

DanaosONE™ Web and Mobile Services

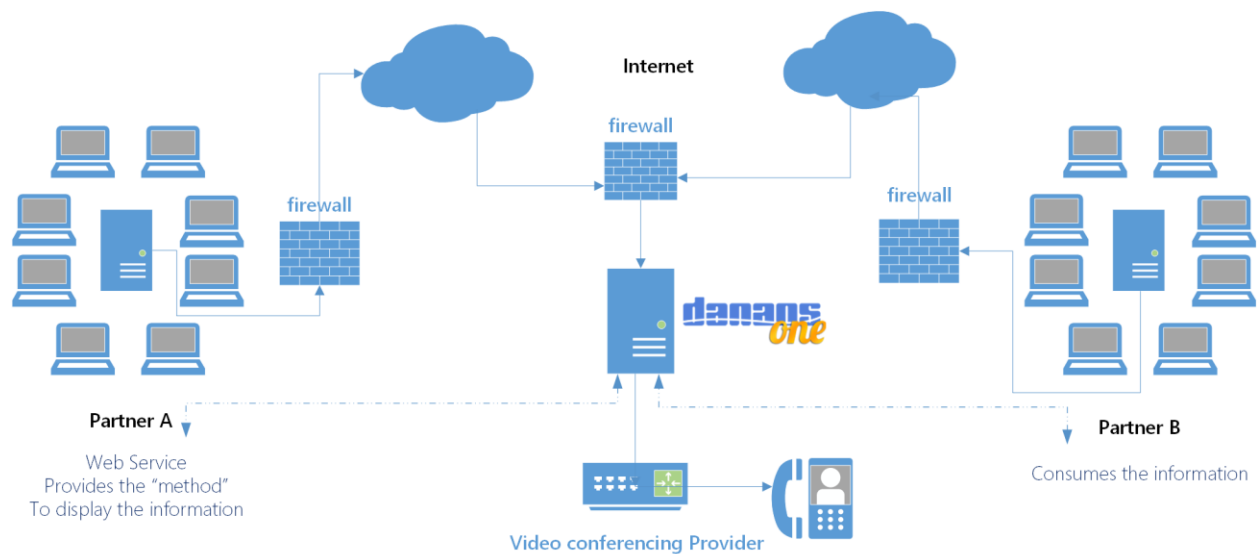

DanaosONE™ Platform is considered to be a “social network for shipping”. Although only companies and their approved employees are able to participate, the only features that qualify it as a social network are the messaging capabilities, the collaboration, the promotion and the Shipping Directory (*the “yellow pages”*)

DANAOS has carefully integrated Microsoft Lync (Skype for Business) services to provide multi participant video conference and live chat, whilst a messaging system similar to email already existed from the ground up. Danaos messaging system allows companies and employees to attach links to services into messages.

DanaosONE™ Platform is more than a social network through its Services: It becomes a Business Operating System

What are the DanaosONE™ Services?

These are specially designed mini applications that run inside the secure environment of DanaosONE Platform without keeping any sort of information inside the Platform. Instead, a web service is installed in each of the partner’s own back-office (in-house) system in order to transfer information to the collaborator:

Information travels from the Partner A to the Partner B in a completely secure line without storing information at any point.
